

**REMARKS**

The amendment to the specification further clarifies the nature of the drawings in the present case. No new matter has been added.

Claims 1-10 and 29-36 of the present application are identical to the corresponding claims of co-pending U.S. Patent Application Serial No. 10/230,368 ("the '368 parent application"), which is the parent of the instant application. In the '368 parent application, the Examiner issued a species based restriction requirement dated April 22, 2003, which stated that (1) the claims would be limited to an elected species if no generic claim was allowed, and (2) no claim appeared to be generic. Applicant subsequently elected claims 1-10 and 19-36 as directed to the species of radial deployment of structures made from different materials.

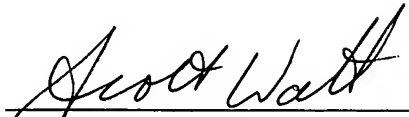

Although the Examiner allowed claims 1-10 and 29-36 on first action, none of these claims were expressly identified by the Examiner as generic. Accordingly, to the extent that the noted claims from the parent application are limited to the elected species, then Applicant herein resubmits these claims for consideration with respect to the previously unelected species. This includes structures with lateral cell deployment and/or use of the same materials.

Sotirios KELLAS  
Div. of Appln. No. 10/230,368

Should there be any questions, the Examiner is invited to contact the undersigned at the below listed number.

Respectfully submitted,

Dated: 2/13/04
